

UNIVERSITY OF ARKANSAS PINE BLUFF EDUCATION PREPARATION PROVIDER GROWTH REPORT

Contents of Report:

This report provides a summary of the value-added growth scores for the Educator Preparation Provider for three years of Completer Cohorts. Tables and charts are provided for review of the value-added growth scores of students associated with Completers in each Cohort.

TREND CHARTS BY PROVIDER

Understanding Trend Charts

A: The green line is a reference line to show that a value-added score of 80 indicates, on average, students met expected growth in achievement.

B: The gray points and line indicate the average EPP VAS across ALL PROVIDERS for a particular subject or the overall score.

C: The vertical line is the confidence band around each score. See below for more information on how to interpret these bands.

Information for Reviewing the Trend Charts

Completer Cohorts may differ in number of teachers within the cohort and over time. 95% confidence bands are provided to support interpretation of differences in mean Completer Cohort VAS.

When the confidence band does not overlap, the differences between scores are likely significant and may be meaningful depending on the N size for the group.

When the confidence band overlaps, the differences between scores may not be significant nor meaningfully different—more information may be needed such as a statistical test and effect size.

Review the charts of Mean VAS for a Completer Cohort for each subject over time.

- Note the trends (over time) for each cohort and any patterns (across subjects) within or across cohort.
